SimpleCapture 2.5

The First Click-to-Capture™ Imaging Solution

Capture the Cost Savings of Document Imaging — Sooner

Corporate business managers, IT managers and industry analysts all agree that document imaging saves money. It reduces hard costs by eliminating manual data entry from paper and enabling electronic workflows, search and retrieval. It has been one of the safest bets in information technology for nearly 30 years. When corporate IT rebelled against expensive, complex and rigid ERP systems and even years later, when the dotcoms melted down, imaging continued to grow. Even during the latest recession, imaging continued to sell. That's no surprise. Imaging systems are reasonably priced and payback can be measured in weeks or months rather than years.

However, some of the best-known capture applications have begun to look like the enterprise applications buyers and users have shunned: expensive, difficult to learn and use and requiring countless hours of consulting to get the most out of them. What happened to quick payback?

Simple to Buy, Simple to Learn and Simple to Use. And that's Simply Efficient.

We wondered too. That's why we created SimpleCapture. It's simple to buy, simple to learn and simple to operate. If you can use a mouse, you can capture invoices, bills of lading, claim forms and other critical documents within minutes — even more accurately than with fully automated systems.

Just Click to Capture™

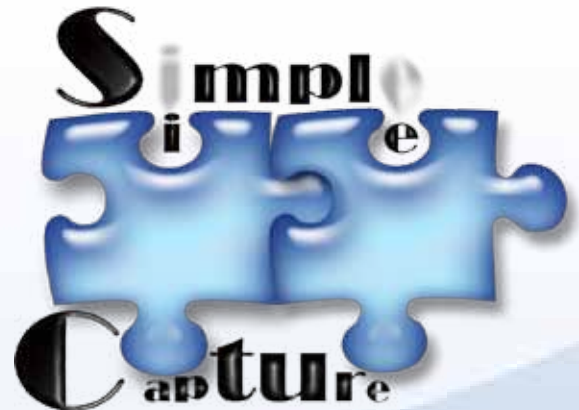

SimpleCapture introduces the first click-entry semi-automated capture platform. Just click on a word or number in the document image on the right side of the screen and SimpleCapture enters it in the correct data field on the left. Click and drag to capture multi-word and number fields or entire tables. Is it fast and accurate? SimpleCapture delivers the cost savings of complex, expensive automated capture systems with the accuracy of double hand-keyed entry. And unlike complex systems, seeing a five-minute demo is believing. Schedule yours today!

Key Benefits

- Reduce data-entry costs today — not months or years from now.
- Adapts to your existing business processes. No hidden costs or user acceptance issues.
- Eliminate expensive training that can cost thousands per person and delay benefits.
- Accelerate Business Processes: Increase customer satisfaction and capture new business.
- Increase your cost savings over time with AutoFind: Learns to identify your documents as you work. From the first exposure, SimpleCapture's AutoFind increases automation and your cost savings.
- Reduce costly errors: Click-to-Capture™ eliminates false positives of fully automated solutions.
- No page limit license. A page limit will never prevent a job from being completed.

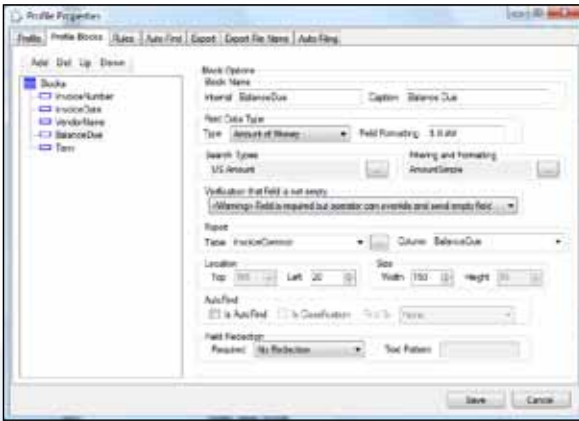

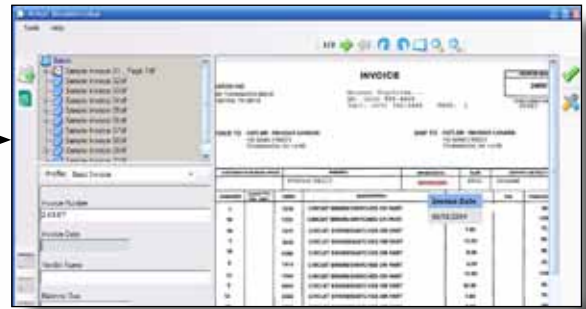

“SimpleCapture competes easily with the best of breed. It allows us to very easily train an operator to utilize the program and then it reduces the operator time by 80%.”

— Michel Laurin, vice president, Le Groupe A&A

Click-to-Capture™

Artsyl's unique, intuitive, semi-automatic data capture feature. The program automatically presents each document image and the operator merely clicks on the location of the data to capture it. SimpleCapture presents the data field in its own editable window.

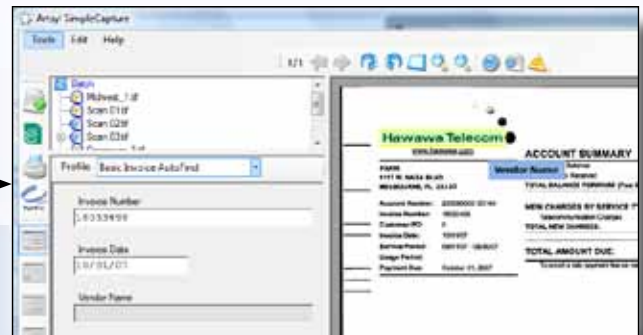

Profile Editor

Create and manage document profiles without programming in the SimpleCapture Profile Editor.

AutoFind:

Automatically locates data fields. It learns to identify documents and field locations by remembering the operator's mouse movements and clicks during Click-to-Capture™ mode. AutoFind classifies a document the first time it sees it and accuracy increases with each exposure. Now validate all fields with a single keystroke.

```
<?xml version="1.0" encoding="utf-8" ?>
- <DOCUMENT dateExport="19/12/2008 12:58:17 PM">
- <DATA>
- <table tablename="DocumentInfo">
- <row index="0">
<FileName>RTV Slip 1.tif</FileName>
<FileLength>55516</FileLength>
<FileDateTime>15/12/2008 3:10:22 PM</FileDateTime>
<PagesCount>1</PagesCount>
<ProfileName>RTV Slip</ProfileName>
<Machine>ARTURVISTANB</Machine>
<UserName>Artur Vassilyev</UserName>
</row>
</table>
</DATA>
</DOCUMENT>
```

XML Input Automation

SimpleCapture now recognizes XML tickets associated with an image. XML tickets can contain full or partial instructions on recognition, workflow routing, export and other options. It can also contain data captured in third party applications, as well as meta-data that will be preserved and exported when a document leaves SimpleCapture.

Barcode Recognition

Recognizes common 1D and 2D barcodes. SimpleCapture can apply the same auto-formatting and auto-validation features as those used for text field capture.

AutoFiling

Automatically names and files documents according to user-specified choices. Splits a single output stream into a system of organized subfolders and documents, which are named automatically based on captured data, metadata or threshold split values.

Full-Text Indexing

Optional module performs full-page OCR which enables output of a full-page TXT index or a searchable PDF.

SharePoint 2007 integration:

The Microsoft Office SharePoint Server 2007 Connector saves documents and captured data to the SharePoint Library. You can even save full-page OCR results in TXT or PDF format and automatically store everything in SharePoint Server with a single click.

As Flexible and Powerful as Systems Costing Far More

- Scalable: Add more CPUs, workstations or step up to Artsyl's docAlpha server-based solution to maximize throughput and manageability.
- No Programming Required: Create document templates and even powerful database validations with a few clicks of your mouse.
- Automatically import various document types from your fax server, MFP, scanner or network.
- Automatically select workflows based on multiple hot folders: Profile selection, processing details, export settings and destination can be auto-selected for each incoming image. This can automate common job types and eliminate extra clicks.
- Integrate with multiple back-end workflows and applications from a single SimpleCapture workstation.
- Capture and manage all of your content: SharePoint, FileBound, Digitech PaperVision, Laserfiche and SentryFile integration available.

- AutoExport: Send images and data to multiple destinations with a single click Export data to XML, CSV, TXT, XLS and databases.
- Database Lookup Editor (NEW): Capture one key field and automatically fill and validate the rest. No scripting required. Just set up in the user interface.
- Multi-CPU Processing (NEW) (optional): Uses parallel processing when multiple CPUs are available to maximize throughput.
- Redaction (NEW)(optional): Automatic background processing or visual confirmation of each redaction.
- Cursor Guided Operation: Optimizes keyboard efficiency.
- Multiple Watch Folders: SimpleCapture can monitor multiple watch ("hot") folders simultaneously, each associated with its own document type, and automatically import and present each document.
- Automatic Image Cleanup: Supports color or black and white TIFF, JPG and PDF.
- Metadata Auto-Fill (NEW) (optional): Automatically capture metadata such as current date, computer name, operator name, original source document name, etc.
- Automatic Document Separation: Separates by barcode, first-page text string and blank page. Or drag and drop to separate or assemble.
- Built-In Document Profiles: Simple invoices, detailed invoices, bills of lading, etc. No need to start from scratch.
- Table Extraction: Column and cell-mode. Just click and drag.
- Microsoft .NET export API: Enables programmatic integration with many back-end content management, ERP or other enterprise applications. A sample connector has been included which may be modified as needed.
- Upgradable to Artsyl's docAlpha™ fully automated server-based solution. docAlpha automatically load-balances SimpleCapture workstations as well as performing automated processing.
- Supported image formats: TIFF, JPG, PNG, PDF

"The software has done everything we were told it would do."

— John Paczkowski, vice president, finance,
Link + Corporation

Where to use SimpleCapture

- Accounting: Built in templates for simple and complex invoices. Supports tables. SimpleCapture has been optimized for invoice automation.
- Healthcare: Reduce claims capture costs and ease the transition to electronic patient records.
- Logistics: Capture bills of lading to confirm delivery and speed payment. Templates included.
- Human Resources: SimpleCapture makes an affordable and easy-to-use resume and admissions processing tool.
- Legal: Full-text searchable PDF export and automatic and manual redaction for compliance and e-Discovery.

System Requirements

Operating Systems: Windows XP SP2, Windows Server 2003, Windows Vista SP1; Minimum CPU: 1.2 GHz; Minimum Memory: 512 MB; Minimum Hard Drive: 30 GB; Minimum Monitor: 15-inch full color; Minimum Optical Drive: CD-ROM Minimum Internet Connection: dial-up (for activation and support only) Image Input Device: Scanner, Fax Server, MFP, Electronic Delivery.

Pricing and Availability

SimpleCapture is sold on a per seat basis and without any per page charges. Please contact your local representative to see a demo or obtain a trial copy. To locate your nearest Artsyl representative, contact NewWave Technologies, Inc. at 800.536.5222.

For more information or to download a demonstration version of SimpleCapture, visit www.simplecapture.com.
